Projection Screen

Product Guide

ABOUT PROJECTA

Projecta is Europe's leading manufacturer of high-quality projection screens from Weert, The Netherlands. We started in 1952, and today offer a wide range of projection screens with various high-resolution and ambient light rejecting surfaces. You'll love how quick our customization services can be. Our teams are all over Europe.

Local Teams to Support Your Business in the UK and Mainland Europe

The Legrand AV teams are located all over Europe to support your projects. Our local teams can connect with you in your own language with knowledge of the local market. They can assist you on projects, projection knowledge and much more.

Built in The Netherlands with Fast Delivery

Projecta projection screens have been manufactured from high quality materials in the Netherlands since 1952. Most products can ship only a couple of days after the order for a quick delivery. We build our projection screens from start to finish, so we can monitor the quality in every step.

Innovation Based on Current and Future Projector Needs

Projecta keeps track of what's going in the AV market and develops projection surfaces that match current and future projector technologies. The engineering of the HD Progressive line of projection surfaces is a great example of this.

The features of these projection surfaces are developed to match the specific requirements of high-resolution projection, like preventing microscopic variances in the base material for pixel preservation. Another example is the Parallax Series range of Ambient Light Rejection materials.

Customization

Projecta projection screens are built to order from start to finish in-house to ensure a high level of flexibility. When your order comes in, we almost instantly start the production of your projection screen,

and customizing can be done just as quick. Because of this, we can design and manufacture custom projection screens to match every challenging project.

Since 1952

Multi-lingual Tech Support Team

The multi-lingual Projecta field and inside sales teams are trained to support your project. We can assist with making the right choice for a projection screen that matches the projector capabilities for the optimal end results. Our customer service team will reply quickly and accurately to your question and quote requests every day.

STEPS TO SELECT YOUR PROJECTION SCREEN SOLUTION

1 Select your projection screen

Check the resolution of the projector you are planning to use and match this with a range of projection surfaces. Not every projection surface can maintain the quality of a projector.

	MOTORIZED ceiling recessed	MOTORIZED wall/ceiling mounted	FIXED FRAME wall mounted	MANUAL wall/ceiling mounted

Determine the right size

Make sure a size of screen is used that allows everyone in the room to comfortably read what is on the screen. You can calculate the diagonal of the projection screen that will match your situation by dividing the room depth by two. This calculation can be used for 16:10 and 16:9 aspect ratios.

2 Select your projection surface

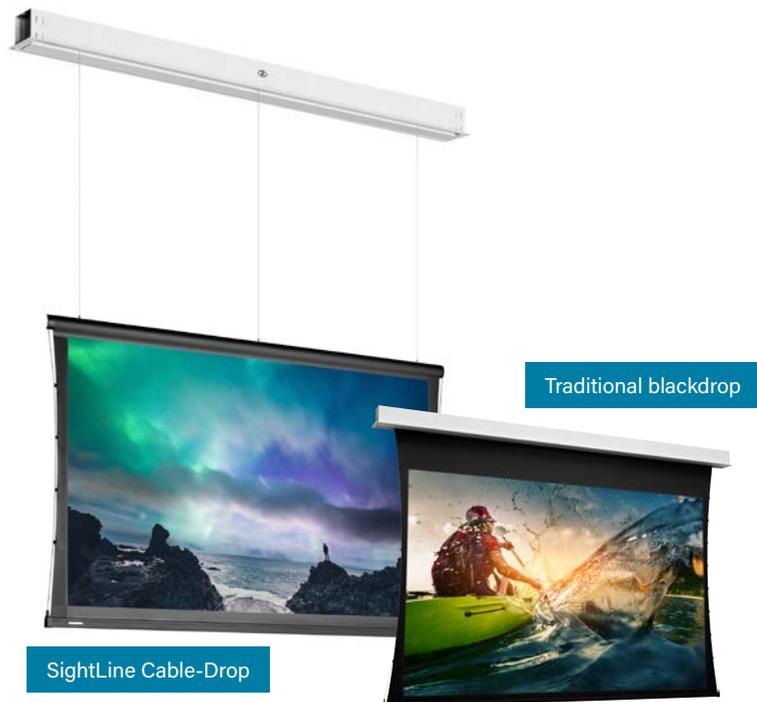

Here you can find an easy overview that shows when which projection surface can be used.

MOTORIZED - CEILING RECESSED Tensioned DescenderPro

HIGH RESOLUTION PROJECTION SOLUTIONS

The Tensioned DescenderPro is a ceiling-recessed projection screen that combines innovative installation features like SightLine with high resolution HD Progressive and ALR surface options.

Features

- SightLine replaces the standard black border above the projection area with 3 or 4 thin cables that can be extended up to 180 cm onsite. Now your view above the projection screens projection area is no longer blocked and gives the impression of a large floating image.
- The tab-tensioning system will keep the high-resolution projection surface under a constant tensioning for a perfectly flat viewing area.
- Clean finish without gaps and flush with the ceiling.
- Roller with fabric and motor can be removed and re-installed with an easy plug and play system. Resulting in:
 - » Service and installation-friendly.
 - » Possibility to order the screen case separate from the screen surface assembly.
- Available up to 400 cm wide in a small case design
- 5-year warranty

MOTORIZED - CEILING RECESSED
Tensioned Descender Large

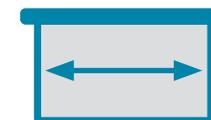

HIGH RESOLUTION
PROJECTION SOLUTION

The Tensioned Descender Large is a ceiling-recessed projection screen for medium to large applications available with high resolution HD Progressive and ALR surface options.

Features

- Easy Serviceability System: once installed, the motor and screen surface remain accessible making adjustments and carrying out maintenance possible.
- Order the screen case separate from the screen surface assembly for maximum flexibility and an easy installation.
- The tab-tensioning system will keep the projection surface under a constant tensioning for a perfectly flat viewing area.

MOTORIZED - WALL/CEILING RECESSED Extensa

HIGH RESOLUTION PROJECTION SOLUTIONS

The Extensa is a projection screen for wall/ceiling installation developed for larger applications available with high resolution HD Progressive and ALR surface options.

Features

- The Extensa makes high resolution projection available for larger installations with a screen size up to 700 cm wide.
- Robust case with a powerful motor.
- The tab-tensioning system will keep the projection surface under a constant tensioning for a perfectly flat viewing area.
- The motor is equipped with electric locks to prevent inadvertent unrolling and features thermal overload cut-off.
- The underside of the case is open as standard. A closed version can be supplied at additional cost.

FIXED FRAME – WALL MOUNTED

FullVision

HIGH RESOLUTION PROJECTION SOLUTIONS

Features

- The FullVision is a low-profile lightweight frame screen that is mounted close to the wall for an inconspicuous installation.
- The projection surface is wrapped around the aluminum frame (8 cm wide and 3 cm deep) and is attached to the rear of the screen with Velcro® for easy installation.
- The FullVision is easy to assemble and includes an innovative corner design for a fast installation.
- All projection surfaces are seamless within the viewing area and exceptionally flat, making it suitable for all types of data and video projection.

**Available up to
600 cm wide**

Completely border-less and low-profile fixed frame projection screen that enables the entire surface to be used for projection.

HomeScreen Deluxe

HIGH RESOLUTION PROJECTION SOLUTION

Luxurious, high quality fixed frame screen with a black velvet frame finish and a wide selection of screen surfaces.

Features

- The flat aluminium frame for the HomeScreen Deluxe has a black velvet cover, which eliminates reflection and serves to absorb projected light.
- The frame (8 cm wide and 3 cm deep) features a beveled edge, reducing shadowing in the viewing area.
- The projection screen surface is attached to the rear of the screen with Velcro® for easy installation.

Parallax

HIGH RESOLUTION PROJECTION SOLUTION

Parallax Pure is an ambient light-rejecting technology that features a micro-layered optical lens system that rejects light.

Features

- Parallax Pure 0.8 surface for standard throw projectors (1.5:1 or greater)
- Parallax Pure UST 0.45 surface for ultra short-throw projectors (0.4:1 throw or less)
- With extremely wide viewing angles, no speckle and no glare, the surface is ideal for applications in Pro AV.
- Some layers absorb light while one special layer is shaped like a microscopic saw-tooth that blocks light from above resulting in the preservation of high-contrast, bright images in brightly lit environments.
- Ships unassembled and easy to install

**Available up to
347 cm wide**

Available Surfaces

Ambient Light Rejection

Parallax Pure 0.8
Parallax Pure UST 0.45

Features

- The Projecta Controlled Screen Return (CSR) allows for the projection screen surface to retract gently into the case in a smooth and controlled manner.
- Easy to mount onto a wall or ceiling thanks to the Easy Install system.
- Available up to 280 cm wide in a square case design.
- The screen locks into place at 13 cm intervals for possible height adjustment.

**Available up to
280 cm wide**

The ProScreen CSR is manual projection screen with the reliable Controlled Screen Return, available with projection surfaces intended for basic resolution.

MANUAL – WALL/ CEILING MOUNTED

Hapro CSR

BASIC RESOLUTION PROJECTION SOLUTION

Features

- The Projecta Controlled Screen Return (CSR) allows for the projection screen surface to retract gently into the case in a smooth and controlled manner.
- Easy to mount onto a wall or ceiling thanks to the Easy Install system.
- Available up to 340 cm wide in a square case design
- The special Controlled Screen Return spring mechanism for the Hapro CSR is very strong. It retracts the projection surface quickly for the first part and then slows down to roll into the case smoothly.

**Available up to
340 cm wide**

The Hapro CSR is a larger manual projection screen with the reliable Controlled Screen Return, available with projection surfaces intended for basic resolution.

Available Surfaces

Top 5 Reasons

Why You Need a Projection Screen

01 Everyone's looking at it.

The projected image holds value in the viewer's mind. When that image lands on the surface, ask yourself: How does it look? Is the image dull or washed out? Is the viewing area too small? Is the screen positioned too high? Can everyone in the room see the image? Projecting on another surface or material will offer some sort of image, but it will never provide the bright and uniform visuals a projection screen guarantees. What kind of lasting impression will you choose?

01

02 The right ingredients make a tasty dish.

It's hard to whip up your favorite recipe when you're missing all the main ingredients. It just doesn't taste the same. Projectors and screens are designed to work in harmony to provide the best possible image. For example, if you want to produce a high contrast image, you need a projector that can produce high contrast natively and you also need a screen that can do the same thing. If you want high resolution, like 4K imaging, you need a projector that can produce a 4K resolution image and you need a screen that can make that happen.

02

03 Room size and cost still play a critical role.

While great things are happening to advance AV technology, a projection system has its place. Flat panels still can't be scaled large enough for even medium size rooms. Some LED walls may not have a fully uniform image because of bezel interference or may be cost prohibitive. For rooms larger than 15' (4.6 m) deep, or diagonals over 90°, a projection screen is still the best choice.

03

04 Who doesn't love options?

Projection screens are available with a wide selection of screen surfaces – each with their unique set of features that improve or retain the projected image to specifically deal with various projection challenges. Whether it's edge blending, large venue, acoustically transparent, front or rear projection, foldable, laser projection, ultra-short throw, short throw and standard lens, projection screens are versatile.

04

05 Buy it and forget it.

While projector manufacturers are working on higher resolution solutions, many screen surfaces are 16K ready – making the projection screen a long-term investment. So, it's likely that the projector will be replaced long before the screen.
